### Research Summary

HNB Heater is one of the core components of HNB appliances. A common heating pad is a metal circuit printed on a ceramic substrate. It has application forms such as chip heating elements, needle-shaped heating elements, and tubular heating elements. HNB working principle: The user inserts the needle-shaped (sheet-shaped) ceramic heating piece into the cigarette cartridge (tobacco sheet), and uses the heating element silk-screened on the ceramic heating piece to heat the cigarette cartridge (usually the temperature is controlled by an electronic chip. 300-350°), the tobacco flakes produce smoke close to the taste of real cigarettes through thermal cracking reaction, and the smoke then passes through the cooling section and filtering section for smoking. The main technical barriers are reflected in heating devices, temperature control systems, and tobacco sheet molding. The core are heating methods and tobacco sheet molding.

The major global manufacturers of HNB Heater include Venture, Flex Corporation, Shenzhen Buddy Technology, Taotao Technology, Key Material, Shenzhen Huachengda Precision Industry, etc. The global players competition landscape in this report is divided into three tiers.
