Research Summary

Hole Transport Materials (HTMs) are a crucial component in the fabrication of organic electronic devices, particularly in organic photovoltaic cells and organic light-emitting diodes (OLEDs). HTMs facilitate the movement of positive charge carriers (holes) within the active layer of these devices. They are typically organic compounds designed to efficiently transport holes from the light-absorbing material (such as a photoactive layer in a solar cell or an emissive layer in an OLED) to the electrode, completing the electrical circuit. Commonly used HTMs include organic semiconductors and conductive polymers, selected for their ability to promote charge carrier mobility and stability. The performance of HTMs significantly influences the efficiency and reliability of organic electronic devices, making them a critical element in the advancement of sustainable and flexible electronic technologies.

The major global manufacturers of Hole Transport Materials (HTMs) include DUKSAN Neolux, Merck, Idemitsu Kosan, Solus Advanced Materials, DuPont, Samsung SDI, Hodogaya Chemical, LG Chem, NIPPON STEEL Chemical & Material, Jilin Oled
