Research Summary

A hollow fiber dialyzer is a medical device used in hemodialysis, a life-sustaining treatment for individuals with kidney failure. This dialyzer is a key component of a hemodialysis machine, serving as the artificial kidney during the blood purification process. The hollow fiber design consists of thousands of tiny, semi-permeable hollow tubes bundled together within the dialyzer. Blood flows through these fibers, and on the outside, a dialysate solution circulates to facilitate the exchange of waste products and excess fluids from the patient's blood. The semi-permeable membranes selectively allow waste and excess fluids to pass through, mimicking the filtration function of healthy kidneys. Hollow fiber dialyzers are integral to modern hemodialysis treatments, providing an efficient means of removing toxins and maintaining fluid balance in patients with compromised kidney function.

The major global manufacturers of Hollow Fiber Dialyzer include Fresenius, Baxter, NIPRO, B. Braun, Asahi Kasei, NIKKISO, Toray, Bain Medical, Medica, SB-Kawasumi Laboratories, WEIGAO, Allmed, Farmasol, Shanghai Peony Medical, etc. The global
