Research Summary

Holographic lamination film is a specialized material used to apply holographic effects and security features to surfaces through lamination. Typically made of layers of plastic film, this holographic lamination film incorporates holographic patterns or images. The lamination process involves applying the film to printed documents, packaging, or other surfaces using heat and pressure, creating a visually striking and iridescent appearance. Beyond its aesthetic appeal, holographic lamination film is often employed for security and anti-counterfeiting purposes, as the holographic elements are challenging to reproduce with conventional printing techniques. This makes holographic lamination film a popular choice for enhancing the visual appeal and authenticity of various items, including ID cards, certificates, product packaging, and promotional materials.
