Research Summary

Hospital room pressure monitors are devices used to measure and regulate air pressure differentials between various areas within healthcare facilities, especially in spaces like isolation rooms, operating rooms, and cleanrooms. These monitors help maintain controlled environments by ensuring that air flows appropriately, preventing the spread of contaminants, and contributing to infection control. Positive pressure is often maintained in areas such as operating rooms to keep airborne contaminants out, while negative pressure is utilized in isolation rooms to prevent the spread of infectious agents. Hospital room pressure monitors continuously monitor and provide feedback on the pressure levels, alerting healthcare staff to any deviations from the specified conditions. These monitors are crucial for creating and sustaining safe and sterile environments in healthcare settings, supporting patient well-being and reducing the risk of hospital-acquired infections.

The major global manufacturers of Hospital Room Pressure Monitors include TSI Incorporated, Setra Systems (Fortive), Johnson Controls (Triatek), Greystone Energy
