Research Summary

A hot runner system is an integral component in injection molding processes, designed to efficiently control the flow of molten plastic into the mold cavity. In injection molding, a hot runner consists of a manifold and nozzles that are heated to maintain the plastic material in a molten state as it is injected into the mold. The hot runner system eliminates the need for a cold runner (a channel used to transport molten plastic) by keeping the plastic continuously molten within the system. This leads to reduced material wastage, shorter cycle times, and improved overall efficiency in the molding process. Hot runner systems are commonly used in the production of plastic parts with complex shapes and intricate designs, where precise control of material flow is crucial for achieving high-quality and consistent molded products.

The major global manufacturers of Hot Runner include YUDO, Milacron, Barnes Group, Husky, INCOE, Seiki Corporation, Gunther, EWIKON, CACO PACIFIC Corporation, HASCO Hasenclever GmbH, Oerlikon, Hotsys, FISA, Mold Hotrunner Solutions, Dongguan Best, Guangdong Frenke Molding Technology, MOULD-TIP, ANNTONG, etc. The global players competition landscape in this report is divided into three tiers.
