### Research Summary

Hot stamping foil is a specialized material used in the hot stamping process, a decorative finishing technique often employed in printing, packaging, and labeling industries. This foil is typically made of a thin layer of metallic or pigmented material coated with a heat-activated adhesive. In the hot stamping process, the foil is placed between a heated die and the substrate (such as paper, plastic, or leather). The heated die presses down on the foil, activating the adhesive and causing the foil to adhere to the substrate. The result is a shiny, metallic, or colored imprint on the surface, enhancing the visual appeal and aesthetic qualities of the stamped material. Hot stamping foils are available in a variety of colors, finishes, and patterns, offering a versatile and customizable solution for adding decorative elements to a wide range of products and materials.

The major global manufacturers of Hot Stamping Foil include KURZ, API, CFC International(ITW Foils), Crown Roll Leaf, Inc, Nakai Industrial, OIKE &, UNIVACCO Foils, KATANI, WASHIN CHEMICAL INDUSTRY, K Laser, KOLON Corporation,
