Research Summary

HTCC (High-Temperature Co-Fired Ceramic) packages are specialized enclosures or housings used in the microelectronics industry to protect and encapsulate high-performance electronic components, sensors, or integrated circuits. These packages are manufactured through a co-firing process, where layers of ceramic material are stacked and fired at elevated temperatures to create a robust and hermetic structure. HTCC packages are known for their exceptional thermal stability, mechanical strength, and resistance to harsh environmental conditions, making them suitable for applications that involve high temperatures, corrosive substances, or challenging operating environments. The HTCC packaging process allows for the integration of complex electronic circuits, wiring, and other components into a single, compact unit, ensuring reliable performance in demanding industries such as aerospace, automotive, and telecommunications where durability and high-temperature resistance are crucial.

The major global manufacturers of HTCC Package include Kyocera, Maruwa, NGK/NTK, Egide, NEO Tech, AdTech Ceramics, Ametek, Electronic Products, Inc.
