Research Summary

A human airbag wearable is a safety device designed to protect individuals from injuries during falls or accidents. This wearable technology typically incorporates sensors that can detect sudden changes in acceleration or orientation indicative of a fall. When a potential fall is detected, the device rapidly inflates an airbag around the person's body, creating a cushioning effect to absorb impact and reduce the risk of injury, particularly to vulnerable areas such as the hips. This type of wearable airbag technology is often utilized by the elderly or individuals with mobility challenges to provide an additional layer of protection against the consequences of accidental falls, promoting independence and safety in daily activities.
