Research Summary

A humidifier is a device designed to increase the moisture content in the air, particularly in indoor environments where the air tends to be dry. It works by releasing water vapor into the air, thereby raising the humidity levels. Humidifiers are commonly used to alleviate symptoms associated with dry air, such as dry skin, irritated throat, and respiratory discomfort. They are especially beneficial in climates with cold winters or in centrally heated or air-conditioned spaces, where the air can become excessively dry. Humidifiers come in various types, including evaporative humidifiers, ultrasonic humidifiers, impeller humidifiers, and steam vaporizers. Some models are designed for specific purposes, such as relieving cold or flu symptoms, while others are suitable for general use to maintain a comfortable and healthy indoor environment. Regular maintenance and proper cleaning of humidifiers are essential to prevent the growth of bacteria and molds in the water reservoir.

The major global manufacturers of Humidifier include Conair Group, Dyson, Honeywell, Philips, Vornado, Gree, Panasonic, Vicks, Crane, AprilAire, Midea, Guardian Technologies, BONECO AG, Levoit, etc. The global players competition landscape in
