### Research Summary

Hydraulic work support refers to a device used in machining and manufacturing applications to provide stable and adjustable support for workpieces during machining or assembly processes. Typically integrated into the workholding system of machinery such as CNC (Computer Numerical Control) machining centers, hydraulic work supports utilize hydraulic pressure to extend and retract support elements, ensuring proper alignment and secure positioning of the workpiece. This support helps to minimize vibrations, deflections, and tool deflection during machining operations, leading to improved accuracy and surface finish. Hydraulic work supports are beneficial in applications where consistent and reliable workpiece clamping and support are critical for achieving precise and high-quality machining results.

The major global manufacturers of Hydraulic Work Support include Enerpac, ROEMHELD, Vektek, Kosmek, Pascal, AMF, JTPMAK, SPX, Hydra-Lock, Hydroblock, AMAC, Mindman, Clasys, Starlet, Wan Ling, Jinlishi, FCSTON, etc. The global players competition landscape in this report is divided into three tiers.
