### Research Summary

Hydrocarbons are organic compounds consisting entirely of hydrogen and carbon atoms, forming the simplest class of organic compounds. They can exist in various forms, such as alkanes, alkenes, and alkynes, depending on the type of carbon-carbon bonds present. Alkanes, also known as paraffins, have only single bonds, while alkenes and alkynes contain double and triple bonds, respectively. Hydrocarbons can be classified as saturated or unsaturated based on the presence of multiple bonds. Saturated hydrocarbons have only single bonds and are typically more stable, while unsaturated hydrocarbons contain double or triple bonds, imparting them with reactivity. Hydrocarbons are fundamental to the field of organic chemistry and are abundant in fossil fuels, serving as the primary components of substances like petroleum and natural gas. They play a central role in various industrial processes, fuel production, and contribute significantly to the global energy landscape.

The major global manufacturers of Hydrocarbon include Total S.A., ExxonMobil, Shell, DuPont, Sinopec, Chevron, BP, Reliance Industries, Engen Petroleum, Sasol Solvents,

Lyondellbasell Industries, Formosa Petrochemical Corporation, etc. The global players competition landscape in this report is divided into three tiers.
