### Research Summary

Hydrogen heavy trucks are commercial vehicles powered by hydrogen fuel cells instead of traditional internal combustion engines or batteries. These trucks use hydrogen gas stored in tanks, which is then converted into electricity through a fuel cell, powering electric motors to drive the vehicle. Unlike electric trucks relying on batteries, hydrogen trucks offer quicker refueling times and longer ranges, making them suitable for long-haul freight transportation. They emit only water vapor as exhaust, making them environmentally friendly. However, the infrastructure for producing, storing, and distributing hydrogen is still developing, posing a challenge to widespread adoption despite their promising potential for reducing carbon emissions in the transportation sector.

The major global manufacturers of Hydrogen Heavy Trucks include Toyota, Hyundai Motor Company, Nikola Corporation, Hyzon Motors, Daimler Truck, Volvo Group, SAIC Motor, Weichai Power, JMC Heavy Duty Vehicle, Dayun Group, Feichi Automobile Manufacture, Xuzhou Construction Machinery Group, Sany Heavy Industry, Hualing

Xingma Automobile, China National Heavy Duty Truck, etc. The global players competition landscape in this report is divided into three tiers.
