Research Summary

Hydrogen silicone oil is a type of modified silicone fluid that contains reactive hydrogen atoms attached to its silicon backbone, typically in the form of Si-H (silicon-hydrogen) bonds. Known for its thermal stability, low surface tension, and excellent water repellency, hydrogen silicone oil is widely used as a crosslinking agent, waterproofing additive, and release agent in industries such as textiles, construction, cosmetics, and electronics. Its ability to undergo chemical reactions, particularly with vinyl groups in the presence of a catalyst, makes it valuable in silicone rubber production and in forming durable, hydrophobic coatings. This versatile material enhances surface properties while maintaining the inherent flexibility and stability of silicone.
