Research Summary

A hydrogen vehicle is an automobile powered by a fuel cell that converts hydrogen gas into electricity to propel the vehicle. These vehicles utilize a fuel cell stack, which combines hydrogen with oxygen from the air to produce electricity, with the only byproduct being water vapor. Hydrogen vehicles offer a clean and sustainable alternative to traditional internal combustion engine vehicles, as they produce zero tailpipe emissions. The electricity generated powers an electric motor, providing the vehicle with the necessary propulsion. Hydrogen vehicles are considered a key component of efforts to reduce greenhouse gas emissions and promote environmentally friendly transportation solutions. While challenges related to hydrogen infrastructure and production methods exist, the development of hydrogen vehicles represents a promising avenue in the pursuit of sustainable and low-carbon transportation technologies.

The major global manufacturers of Hydrogen Vehicle include Toyota, Hyundai, Honda, Foton, SAIC, FeiChi Bus, Dongfeng, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises
