Research Summary

Hydroxyapatite is a naturally occurring mineral form of calcium apatite, which is a crystalline structure comprised of calcium, phosphate, and hydroxide ions. It is the main mineral component of vertebrate bones and teeth, providing them with strength and hardness. Hydroxyapatite is biocompatible and closely resembles the mineral composition of natural bone, making it a valuable material in various biomedical applications. In addition to its role in bone and tooth structure, hydroxyapatite is widely used as a biomaterial in bone grafts, dental implants, and coatings for orthopedic implants. Its biocompatibility and ability to integrate with living tissues contribute to its success in promoting bone regeneration and healing. In the field of materials science, synthetic hydroxyapatite is employed for its bioactive properties in developing bone substitutes and scaffolds for tissue engineering applications.

The major global manufacturers of Hydroxyapatite include SofSera, Fluidinova, Bio-Rad, Bonesupport AB, GE Healthcare, Sigma Graft, Berkeley Advanced Biomaterials, Zimmer Biomet, Nano Interface Technology, etc. The global players competition
