Research Summary

Hydroxypropyl acrylate (HPA) is a chemical compound classified as an acrylic monomer and is derived from the esterification of acrylic acid with hydroxypropyl alcohol. It is a clear, colorless liquid with a characteristic acrid odor and is soluble in water, alcohols, and many organic solvents. HPA is commonly used in the production of polymers and copolymers through polymerization reactions, particularly in the manufacture of water-based coatings, adhesives, sealants, and specialty resins. Its hydroxypropyl functional group enhances adhesion properties, crosslinking capabilities, and compatibility with other monomers and polymers, making it valuable in formulations for various industrial and commercial applications. Additionally, HPA's reactivity and versatility make it a key component in the synthesis of advanced materials used in paints, inks, textiles, medical devices, and other specialty products where adhesion, flexibility, and chemical resistance are desired properties. However, like many chemicals, appropriate handling, storage, and safety precautions should be observed due to its potential irritant properties and flammability.

The major global manufacturers of Hydroxypropyl Acrylate include BASF, Dow, Zibo Xinglu Chemical, Hickory Company, Wuxi Kalider Industrial, Jiangsu Jurong Chemical, Jiangsu Sanyi Technology, etc. The global players competition landscape in this report is divided into three tiers.
