Research Summary

Intracranial Atherosclerotic Disease (ICAD) pathology involves the formation of atherosclerotic plaques within the arteries supplying blood to the brain. Atherosclerosis is a progressive condition characterized by the accumulation of cholesterol, fatty deposits, and inflammatory cells within the arterial walls. In the context of ICAD, this process occurs in the major blood vessels of the brain, leading to the narrowing or blockage of these vessels. The plaques formed in ICAD can reduce blood flow to the brain, potentially causing ischemic events such as strokes. The pathology of ICAD includes the development of atherosclerotic lesions, which may become unstable and prone to rupture, further compromising blood flow. The consequences of ICAD can range from mild cognitive impairment to severe neurological deficits, making it a significant contributor to cerebrovascular diseases. Management and treatment of ICAD often involve lifestyle modifications, medications to control risk factors, and in some cases, interventional procedures to restore adequate blood flow to the brain.

The major global manufacturers of ICAD (Intracranial Atherosclerotic Disease) Pathology include Stryker, Balt, TERUMO, MicroPort, Acandis, etc. The global players competition landscape in this report is divided into three tiers.
