Research Summary

An ICU transport ventilator is a specialized medical device designed for the safe and efficient transport of critically ill patients who require mechanical ventilation. These ventilators are portable and compact, allowing for the seamless transition of patients within a healthcare facility or during inter-facility transfers. ICU transport ventilators are equipped with features to deliver controlled and assisted breathing, ensuring adequate oxygenation and ventilation during transit. They often incorporate advanced monitoring capabilities and alarms to continuously assess the patient's respiratory status. These devices are crucial for maintaining respiratory support while moving patients between different areas of the hospital or during transport to and from other healthcare facilities, ensuring continuity of care for individuals in critical condition.
