### Research Summary

An ICU ventilator, or intensive care unit ventilator, is a critical medical device used to provide life-sustaining respiratory support to patients with severe respiratory failure or those in critical care settings. These sophisticated machines assist patients in breathing by delivering a controlled mix of air and oxygen into the lungs and removing carbon dioxide. ICU ventilators offer various modes of ventilation, allowing healthcare professionals to customize support based on the patient's condition. They play a vital role in managing conditions such as acute respiratory distress syndrome (ARDS), pneumonia, or other respiratory disorders. ICU ventilators feature advanced monitoring capabilities to assess and adjust parameters like airway pressure, tidal volume, and oxygen concentration. The use of ICU ventilators is essential for patients who cannot maintain adequate oxygenation or ventilation on their own, providing crucial respiratory assistance during periods of illness or recovery in the intensive care unit.

The major global manufacturers of ICU Ventilator include Hamilton Medical, Getinge, Draeger, Philips Healthcare, Medtronic, Resmed, Vyair Medical, GE Healthcare,
