Research Summary

An imaging color luminance meter is a device used to measure the color and luminance characteristics of a surface or display in a spatially resolved manner. Unlike traditional colorimeters or spectrophotometers, which typically measure color and luminance at a single point, an imaging color luminance meter captures an entire image and analyzes the color and luminance distribution across the surface. This device combines imaging technology with color and luminance measurement capabilities, providing detailed spatial information about color variations and brightness levels. It is commonly used in applications such as display quality control, color matching in printing, surface inspection in manufacturing, and lighting design, where precise color and luminance analysis across an area or object are required.

The major global manufacturers of Imaging Color Luminance Meter include Konica Minolta, Topcon Technohouse, Westboro Photonics, Admesy, TechnoTeam Vision, ELDIM, JadaK (by Novanta), Instrument Systems, Kerneloptic, Suzhou Fstar Scientific Instrument, Color Vision, Wuhan Jingce Electronic, Hangzhou Everfine, RayClouds, etc.
