### Research Summary

An immersion coolant solution is a specialized liquid used in immersion cooling systems to dissipate heat generated by electronic components or machinery. This cooling method involves submerging the equipment in a dielectric coolant that efficiently absorbs and carries away heat. The immersion coolant solution must have excellent thermal conductivity and heat transfer properties to effectively cool the submerged components, preventing overheating and maintaining optimal operating temperatures. These coolants are often non-conductive and engineered to be compatible with electronic materials, ensuring the safety and reliability of the cooling process. Immersion cooling is gaining popularity in data centers and high-performance computing environments as an energy-efficient alternative to traditional air or liquid cooling systems.

The major global manufacturers of Immersion Coolant Solution include 3M, Solvay, AGC, Chemours, Shell, Honeywell, Engineered Fluids, Capchem, Zhejiang Noah Fluorochemical, M&I Materials Ltd, Dongguan Meide New Materials, etc. The global
