Research Summary

An immersion heater is an electrical device designed to heat a liquid by being immersed directly in it. Consisting of a heating element encased in a protective sheath, immersion heaters are commonly used for applications such as heating water in tanks, boilers, or industrial processes. The heating element, usually made of materials like stainless steel or copper, is connected to a power source, and when energized, it generates heat that is transferred to the surrounding liquid. Immersion heaters come in various shapes and sizes, and their temperature control can be manual or automated depending on the specific application. They are valued for their efficiency, ease of installation, and versatility in providing targeted heating solutions for both residential and industrial settings.

The major global manufacturers of Immersion Heater include NIBE, Thermon, Zhenjiang Dongfang Electric Heating Technology, OMEGA Engineering (Spectris), Watlow, Chromalox, Hotset GmbH, Friedr. Freck GmbH, Zoppas Industries, Thermowatt, Tutco Heating Solutions Group, Tempco Electric Heating Element
