Research Summary

Impregnated activated carbon refers to activated carbon, a porous and highly adsorbent material, that has undergone a treatment process involving the impregnation of specific chemical agents onto its surface. This impregnation enhances the activated carbon's ability to selectively adsorb certain gases, vapors, or contaminants. The choice of impregnating agents depends on the targeted substances for removal, and common agents include potassium iodide, silver nitrate, or various metal oxides. Impregnated activated carbon finds widespread use in air and water purification applications, as well as in industrial processes where the removal of specific pollutants is crucial. The impregnation process imparts tailored functionalities to the activated carbon, making it effective for adsorbing and removing particular contaminants, such as mercury, sulfur compounds, or volatile organic compounds, contributing to improved environmental and safety outcomes.

The major global manufacturers of Impregnated Activated Carbon include Kuraray, Cabot Norit, Carbon Solutions, LLC, Jacobi Carbons, DESOTEC Activated Carbon,
