Research Summary

An IMSI (International Mobile Subscriber Identity) catcher, also known as a cell-site simulator or Stingray, is a surveillance device used to intercept and eavesdrop on mobile phone communications. It operates by mimicking a legitimate cell tower, tricking nearby mobile phones into connecting to it. Once a connection is established, the IMSI catcher can capture data such as the IMSI, IMEI (International Mobile Equipment Identity), and other identifying information from the mobile devices in its vicinity. In some cases, IMSI catchers can also intercept and monitor the content of voice calls and text messages. Law enforcement agencies and intelligence organizations may use IMSI catchers for legitimate purposes such as tracking criminal suspects or gathering intelligence. However, concerns about privacy and potential misuse of these devices have led to debates and discussions regarding their regulation and oversight.
