### Research Summary

An in-wall flush system, commonly known as a concealed cistern or hidden tank, is a plumbing mechanism installed within or behind a wall to operate the flushing of a toilet. Unlike traditional exposed cisterns, which are visible in the bathroom, in-wall flush systems are concealed behind the wall, providing a sleek and modern aesthetic. These systems typically consist of a water tank, flush plate or button, and associated plumbing components. The flush plate or button is the only visible part, allowing for a minimalist and space-saving design in bathrooms.
