Research Summary

An indirect fired air heater is a type of heating system that uses a heat exchanger to warm air indirectly before distributing it to a specific space. In this heating arrangement, a burner produces hot combustion gases that do not come into direct contact with the air being heated. Instead, these gases pass through a heat exchanger, transferring their thermal energy to the surrounding air without mixing with it. This indirect method offers advantages such as maintaining clean air quality and allowing the heater to be used in environments where direct contact between the combustion products and the heated air is not desirable. Indirect fired air heaters find applications in various industries, including construction, agriculture, and manufacturing, where they are used for space heating, drying processes, or other applications that require a controlled and efficient heating solution.

The major global manufacturers of Indirect Fired Air Heater include Mac Heaters, Therm Dynamics, Torqued Heat, Allmand, Rotational Energy, Thawzall, Multitek, ConleyMax Heaters, Flagro, JetHeat, Tioga Air Heaters, Wacker Neuson, etc. The global players
