Research Summary

An induction cooktop is a modern and efficient kitchen appliance that uses electromagnetic induction to heat cookware directly. Unlike traditional gas or electric stovetops, induction cooktops do not have open flames or heating elements. Instead, they generate an electromagnetic field that induces a current in compatible ferrous (iron-containing) cookware. The cookware itself becomes the heat source, rapidly heating up due to the induced current. Induction cooktops offer precise and responsive temperature control, quick heating, and increased energy efficiency. They are known for their safety features, as the cooktop surface remains cool to the touch unless in contact with compatible cookware. Additionally, induction cooktops are easy to clean, making them a popular choice in modern kitchens for their speed, efficiency, and user-friendly features.

The major global manufacturers of Induction Cooktop include Midea, SUPOR, Joyoung, Philips, POVOS, Galanz, Fusibo, Sunpentown, Panasonic, Haier Group, AB Electrolux, Bosch, Whirlpool, Semikron, Waring, Fisher & Paykel, True Induction, Smeg, Miele, LG
