### Research Summary

An induction furnace (IF) is an electric furnace that uses electromagnetic induction to heat and melt metal. It operates by creating a magnetic field around a coil, and when metal is placed within this field, electric currents are induced within the metal, leading to its rapid heating. The inductive heating process allows for precise temperature control and uniform heating, making induction furnaces suitable for melting various metals, alloys, and scrap materials. Induction furnaces are commonly used in foundries, metalworking, and manufacturing processes where the efficient and controlled melting of metals is required. They offer advantages such as energy efficiency, reduced emissions, and the ability to melt metals with high melting points. Induction furnaces are widely employed in the production of castings, and they play a crucial role in the metallurgical industry for their reliability and versatility in metal melting applications.

The major global manufacturers of Induction Furnace (IF) include OTTO JUNKER, Inductotherm Group, ABP Induction Systems, ECM Technologies, Electrotherm, EFD Induction, SMS, Ajax Tocco, Indotherm, Megatherm, Ningbo Haishun Electronic Co.,
