Research Summary

Industrial extraction equipment, particularly CO2 extraction equipment, is specialized machinery utilized in industrial processes for extracting essential compounds from raw materials, such as botanicals or biomass. CO2 extraction involves using supercritical carbon dioxide as a solvent to separate and collect valuable components like oils and cannabinoids without leaving behind residual solvents in the final product. This equipment finds widespread applications in industries such as pharmaceuticals, food and beverages, and cannabis processing, where precise and efficient extraction of specific compounds is essential. The CO2 extraction method ensures the production of high-quality extracts with minimal impurities, maintaining the purity and consistency required for various end products, including pharmaceutical ingredients, essential oils, or cannabis extracts.
