Research Summary

Industrial-grade magnesium chloride is a chemical compound used in various industrial applications, primarily as a source of magnesium and chloride ions. It is typically produced by the extraction of magnesium-rich brine from natural deposits or by the chemical reaction of magnesium oxide with hydrochloric acid. Industrial-grade magnesium chloride is valued for its versatility and wide range of uses, including as a de-icing agent for roads and sidewalks, a dust suppressant on unpaved roads, a catalyst in chemical manufacturing processes, and a component in the production of magnesium metal, magnesium oxide, and various other magnesium compounds. It is known for its hygroscopic properties, meaning it readily absorbs moisture from the air, making it effective for controlling humidity in industrial processes. Industrial-grade magnesium chloride is available in various forms, including flakes, pellets, and solutions, to suit different applications and processing requirements.
