Research Summary

Industrial grade zirconium sponge is a porous, form of zirconium metal, produced through a reduction process typically involving the chemical reduction of zirconium tetrachloride with magnesium. This material is highly valued for its exceptional corrosion resistance, high melting point, and strength, making it suitable for demanding applications in various industries. The sponge form allows for easier handling and further processing into ingots, rods, or other shapes. Industrial grade zirconium sponge is primarily used in the nuclear industry for cladding fuel rods, in the chemical processing industry for its resistance to aggressive environments, and in the aerospace sector for manufacturing high-performance components. Its unique properties make it an essential material for applications requiring durability and reliability under extreme conditions.

The major global manufacturers of Industrial Grade Zirconium Sponge include ATI Metals, Western Zirconium, Framatome, Chepetsky Mechanical Plant, State Nuclear
