Research Summary

An industrial mask refers to a protective face covering designed for use in industrial settings to safeguard workers from airborne hazards, particulate matter, and respiratory irritants. These masks are engineered to provide a barrier that filters out dust, fumes, and other airborne particles, protecting the respiratory system of individuals working in environments where such hazards may be present. Industrial masks come in various types, including N95 respirators, dust masks, and particulate respirators, each designed to meet specific safety standards and provide varying levels of protection. They are essential personal protective equipment (PPE) in sectors such as construction, manufacturing, and mining, where exposure to airborne contaminants is common.
