### Research Summary

An industrial PC (Personal Computer) is a computing device designed and built to operate reliably in harsh industrial environments. Unlike regular consumer PCs, industrial PCs are engineered to withstand conditions such as extreme temperatures, humidity, vibration, and dust. These robust computers find applications in various industrial sectors, including manufacturing, automation, and process control. Industrial PCs are equipped with features like ruggedized enclosures, enhanced cooling systems, and resistance to electromagnetic interference, making them suitable for use in challenging settings where standard computers might struggle. They often serve as control units for machinery, data acquisition systems, or human-machine interface (HMI) devices in industrial automation. The durability and specialized features of industrial PCs contribute to their role in ensuring stable and efficient operations in industrial processes.

The major global manufacturers of Industrial PC include Advantech, Adlinktech, Siemens, EVOC, Norco, Contec, Anovo, AAEON, Axiomtek, B&R Automation, etc. The global players competition landscape in this report is divided into three tiers. The first
