### Research Summary

Industrial waste plastic recycling involves the systematic process of collecting, sorting, processing, and transforming plastic waste generated by industrial activities into reusable materials or products. This sustainable approach aims to reduce the environmental impact of plastic waste by diverting it from landfills and incineration. In industrial settings, plastic waste may originate from manufacturing processes, packaging materials, or product end-of-life. The recycling process typically includes sorting plastic waste by type, cleaning and shredding the materials, and then using various mechanical or chemical processes to convert them into raw materials suitable for manufacturing new plastic products. Industrial waste plastic recycling contributes to resource conservation, energy savings, and the reduction of greenhouse gas emissions associated with the production of virgin plastics. It aligns with the principles of a circular economy by promoting the reuse of materials and minimizing the environmental footprint of industrial plastic consumption.

The major global suppliers of Industrial Waste Plastic Recycling include Indorama
