Research Summary

Industrial X-ray film for non-destructive testing (NDT) is a specialized film used in industrial radiography to capture X-ray images of the internal structures of objects and materials without causing damage. This film is a crucial component in NDT processes employed across various industries, including manufacturing, aerospace, and engineering. It is designed to be sensitive to X-rays, allowing it to record the variations in X-ray intensity as it passes through the inspected material. After exposure to X-rays, the film is developed to reveal detailed images that highlight internal features, defects, or irregularities within the examined components. Industrial X-ray film for NDT is known for its high sensitivity and resolution, making it a reliable tool for identifying flaws, cracks, or voids in metal structures, welds, and other critical components. The use of this film in NDT contributes to quality control and ensures the structural integrity of industrial materials and products without the need for destructive testing methods.
