Research Summary

Inflators are devices designed to introduce air or gas into inflatable objects, such as tires, balloons, sports balls, and inflatable structures. These devices come in various forms, including handheld pumps, electric or battery-powered pumps, and integrated systems in some inflatable products. The primary purpose of inflators is to increase the internal pressure of inflatable items, enabling them to attain the desired size, shape, or firmness. In the context of automotive tools, inflators are commonly used to inflate vehicle tires to the recommended pressure levels for safe driving. Additionally, smaller inflators are used for inflating toys, air mattresses, and other inflatable recreational items.
