Research Summary

An Infrared Detector is a device designed to detect infrared radiation, which is electromagnetic radiation with longer wavelengths than those of visible light. These detectors are sensitive to infrared radiation and are used in various applications across different industries. Infrared detectors can operate on the principle of thermal detection, where they respond to the heat emitted by objects, or they can be based on photoelectric effects, where they detect changes in the intensity of infrared light. These detectors are commonly employed in night vision systems, security and surveillance cameras, medical imaging devices, and temperature sensing applications. The ability to capture and convert infrared radiation into electrical signals makes infrared detectors valuable in a range of technologies and industries, contributing to applications such as thermal imaging, gas sensing, and communication systems.

The major global manufacturers of Infrared Detector include Excelitas, Orisystech, Heimann, Melexis, Amphemol, TE, Semitec, Hamamatsu Photonic, Nicera, KODENSHI, Winson, Senba Sensing Technology, Sunshine Technologies, San-U, etc. The global
