Research Summary

Infrared filters are optical devices designed to selectively transmit or block infrared wavelengths within the electromagnetic spectrum. These filters are used to modify the spectral content of light entering an optical system, allowing only specific ranges of infrared radiation to pass through while attenuating or blocking other wavelengths. In photography and imaging, infrared filters are often employed to capture images in the infrared region, revealing details that may not be visible in the visible light spectrum. In industrial applications, these filters are utilized to isolate specific infrared bands for purposes such as thermal imaging or material analysis. Infrared filters play a crucial role in various technologies, contributing to applications ranging from scientific research and surveillance to medical diagnostics and telecommunications, where the control and manipulation of infrared light are essential.

The major global manufacturers of Infrared Filters include Zhejiang Quartz Crystal Optoelectronic, Optrontec, W-olf Photoelectric, Shenzhen O-film Tech Co, Tanaka Engineering Inc, Unionlight, Viavi Solutions, Jingbang Optoelectronics Technology, etc.
