### Research Summary

Infrared glass refers to a type of glass that is designed to transmit infrared radiation while blocking or minimizing the transmission of visible light. This specialized glass is formulated to be transparent to infrared wavelengths, which are longer than those of visible light, making it suitable for applications where the transmission of heat or thermal imaging is required without the interference of visible light. Infrared glass finds use in various optical systems, sensors, and instruments, particularly those used in thermal imaging cameras, night vision devices, and industrial processes that involve heat sensing. The ability of infrared glass to selectively allow the passage of infrared radiation while limiting visible light makes it valuable in applications where precise control over the spectral transmission is essential for optimal performance.

The major global manufacturers of Infrared Glass include Umicore, LightPath Technologies, Schott, CDGM Glass Company, AGC, Amorphous Materials, Vital Optics Technology (VOT), Corning, Hubei New Huaguang, Vitron Spezialwerkstoffe, Ohara Corporation, Sumita Optical Glass, Rochester Precision Optics, etc. The global players
