Research Summary

An infrared halogen lamp is a type of electric light source that emits infrared radiation, primarily in the near-infrared spectrum, for various heating and drying applications. These lamps contain a tungsten filament encased in a quartz or hard glass envelope filled with halogen gas (such as iodine or bromine) and a small amount of inert gas. When an electric current passes through the filament, it heats up and emits intense infrared radiation, which can penetrate and heat materials without heating the surrounding air. Infrared halogen lamps are commonly used in industrial processes such as drying coatings, curing resins, shrink-wrapping packaging, and heating surfaces in manufacturing applications. They are valued for their instant and precise heating, high efficiency, long lifespan, and ability to produce focused heat without the need for preheating. Infrared halogen lamps find applications in various industries, including automotive, printing, textiles, food processing, and plastics manufacturing.

The major global manufacturers of Infrared Halogen Lamp include Toshiba Lighting, USHIO LIGHTING, Philips, Osram, Aamsco Lighting, INFLIDGE, IWASAKI ELECTRIC,
