Research Summary

Infrared reflective glazing refers to a type of window or glass that is engineered to minimize the transfer of infrared radiation while still allowing visible light to pass through. This technology typically involves applying a thin, transparent coating to the glass surface that reflects infrared wavelengths, reducing heat transmission and improving energy efficiency within buildings or vehicles. Infrared reflective glazing is particularly useful in mitigating solar heat gain during hot weather, thereby reducing the need for excessive air conditioning and enhancing indoor comfort levels. Additionally, it can contribute to the overall sustainability of structures by decreasing energy consumption for climate control purposes.

The major global manufacturers of Infrared Reflective Glazing include Nippon Sheet Glass Co., Ltd., Eastman Chemical Co(Southwall), Asahi Glass Co Ltd, Saint Gobain, Guardian Industries Corporation, Fuyao Group, Central Glass, Pittsburgh Glass Works, LLC, Xinyi Glass Holdings, Abrisa Technologies, etc. The global players competition landscape in this report is divided into three tiers.
