Research Summary

Inkjet colorant refers to the pigment or dye-based substance used in ink formulations to impart color to printed images or text in inkjet printing applications. These colorants are specifically designed to disperse evenly within the ink solution and produce vibrant, long-lasting colors on various printing substrates, such as paper, cardboard, fabrics, or plastics. Pigment-based colorants consist of solid particles suspended in a liquid carrier, offering excellent lightfastness and durability, making them suitable for applications requiring archival-quality prints or outdoor use. Dye-based colorants, on the other hand, dissolve completely in the liquid carrier, providing vibrant colors and smooth printing results but may be more susceptible to fading over time, particularly when exposed to light or environmental factors. Inkjet colorants play a critical role in achieving high-quality, color-accurate prints in inkjet printing technology, meeting the diverse needs of consumers and industries for vivid and visually appealing printed materials.

The major global manufacturers of Inkjet Colorant include Huntsman, DIC, BASF, Clariant, Cabot, Fujifilm, Lanxess, Nippon Kayaku, Toyo Ink, Keystone Aniline
