Research Summary

Inorganic copper fungicides are chemical compounds containing copper ions that are used to control fungal diseases in plants. These fungicides typically consist of copper sulfate, copper oxychloride, copper hydroxide, or copper oxide as active ingredients. When applied to plants, inorganic copper fungicides form a protective barrier on the plant's surface, preventing fungal spores from germinating and infecting the plant tissue. They are effective against a wide range of plant pathogens, including powdery mildew, downy mildew, blight, and rust diseases. Inorganic copper fungicides are widely used in agriculture and horticulture to protect crops such as fruits, vegetables, grains, and ornamental plants from fungal infections, contributing to increased crop yields and improved quality of agricultural produce. However, their use requires careful application to avoid phytotoxicity and environmental contamination, as excessive copper accumulation in soil or water can have detrimental effects on non-target organisms and ecosystems.

The major global manufacturers of Inorganic Copper Fungicides include IQV Agro,

Albaugh, Spiess-Urania Chemicals, Isagro, Manica S.p.a., Biota Agro, Vimal Crop, Parikh Enterprises, Shyam Chemicals, Jiangxi Heyi, Baoding Pesticide, Quimetal, ADAMA, etc. The global players competition landscape in this report is divided into three tiers.
