Research Summary

Instrumentation tubing, also known as impulse tubing or process tubing, is a type of tubing used in industrial instrumentation systems to transport fluids, gases, or hydraulic fluids between process instruments and control devices. These tubes are designed to withstand high-pressure, corrosive, or extreme temperature environments commonly found in industrial settings. Instrumentation tubing is typically made from materials such as stainless steel, copper, or plastic, chosen for their durability, corrosion resistance, and compatibility with the substances being transported. The tubing may vary in size, wall thickness, and material composition depending on the specific requirements of the application. Proper installation and maintenance of instrumentation tubing are essential to ensure accurate measurement and control of process variables, contributing to the safe and efficient operation of industrial processes.

The major global manufacturers of Instrumentation Tubing include Tubacex, Sandvik, Nippon Steel & Sumitomo Metal, CentraVis, Zhejiang Jiuli, Mannesmann Stainless Tubes, Huadi Steel Group, Parker, Swagelok, Webco Industries, Fine Tubes, Maxim
