### Research Summary

Insulating glass units (IGUs), also known as double or triple glazed windows, are composed of two or more glass panes separated by a spacer and sealed around the edges to create a sealed unit. The space between the glass panes is filled with an inert gas, such as argon or krypton, which provides thermal insulation and reduces heat transfer between the interior and exterior of a building. IGUs improve energy efficiency by minimizing heat loss in winter and heat gain in summer, resulting in lower heating and cooling costs. Additionally, they offer benefits such as noise reduction, increased comfort, and reduced condensation. Insulating glass units are commonly used in residential, commercial, and industrial buildings to enhance comfort, energy efficiency, and overall building performance.

The major global manufacturers of Insulating Glass Units include AGC, Guardian Industries, Saint-Gobain, PPG, Trulite, NSG Group, Glaz-Tech Industries Inc, CARDINAL, Sedak, Hartung Glass Industries, VIRACON, Oldcastle, CSG HOLDING, Yaohua Pilkington Glass, JIN JING GROUP, Xinyi Glass, QINGDAO HENG DA
