Research Summary

An insulin injection pen is a medical device designed for the subcutaneous injection of insulin, commonly used by individuals with diabetes to self-administer insulin therapy. The pen typically consists of a cartridge containing insulin and a dial or button for adjusting the desired insulin dose. Insulin pens offer a convenient and portable alternative to traditional vial and syringe methods, providing ease of use and discretion. Users can select the appropriate insulin dose by turning the dial or pressing a button, and the pen delivers the insulin through a fine needle. Insulin injection pens come in disposable or reusable forms, and they are available with various insulin types, making them a popular choice for insulin administration due to their user-friendly design and ability to simplify the injection process for individuals managing diabetes.
