Research Summary

An intelligent capsule endoscopy robot is an advanced medical device designed to perform capsule endoscopy procedures autonomously. Capsule endoscopy involves swallowing a small pill-shaped capsule equipped with a camera, light source, and sensors to capture images and videos of the digestive tract as it passes through the body. The intelligent capsule endoscopy robot takes this concept further by incorporating robotic technology to control the movement and navigation of the capsule within the digestive system. Using artificial intelligence (AI) algorithms and advanced image processing techniques, the robot can analyze the captured images in real-time, identify abnormalities or lesions, and navigate towards specific areas of interest for closer examination. This autonomous operation reduces the need for manual manipulation by healthcare professionals, improves the accuracy of diagnoses, and enhances the efficiency of the endoscopy procedure. Intelligent capsule endoscopy robots have the potential to revolutionize gastrointestinal diagnostics by providing comprehensive and precise imaging of the digestive tract while minimizing patient

discomfort and procedure time.
