Research Summary

An interdental brush is a small, flexible dental tool designed to clean the spaces between teeth, known as interdental spaces or gaps. These brushes typically consist of a handle and a set of thin, bristled filaments arranged in a cylindrical or conical shape. Interdental brushes come in various sizes to accommodate different interdental spaces, and they are used to remove plaque, debris, and food particles from areas that traditional toothbrushes may not reach effectively. They are particularly useful for individuals with braces, dental bridges, or other dental appliances.
