Research Summary

Interior stain is a type of finish applied to wood surfaces within a building's interior to enhance its appearance by highlighting the natural grain and color of the wood. This product is commonly used on wooden furniture, cabinets, doors, trim, and other interior wood elements. Interior stains come in various formulations, including water-based and oil-based options, and they are available in a wide range of colors to suit different design preferences. The application of interior stain involves brushing, wiping, or spraying the product onto the wood surface, followed by wiping off excess stain to achieve the desired color intensity. Once applied and dried, interior stain is typically sealed with a clear finish such as varnish, lacquer, or polyurethane to protect the wood and provide a durable, long-lasting finish. This process not only enhances the aesthetic appeal of the wood but also helps preserve and protect it over time.
